

# DOCK LEVELLER

## PREVENTATIVE MAINTENANCE

### WARNING

DO NOT attempt any service or inspection underneath the deck without securing it with a safety brace.

Spotting trouble before it happens can prevent costly down time and extensive repairs and make it possible for service and repairs to be performed when the unit is not required for regular operations.

Within 3 months, the first standard service is due, thereafter, should you not have a service department, a service contract should be entered into with D.D.L. Equipment or appointed Dealers.

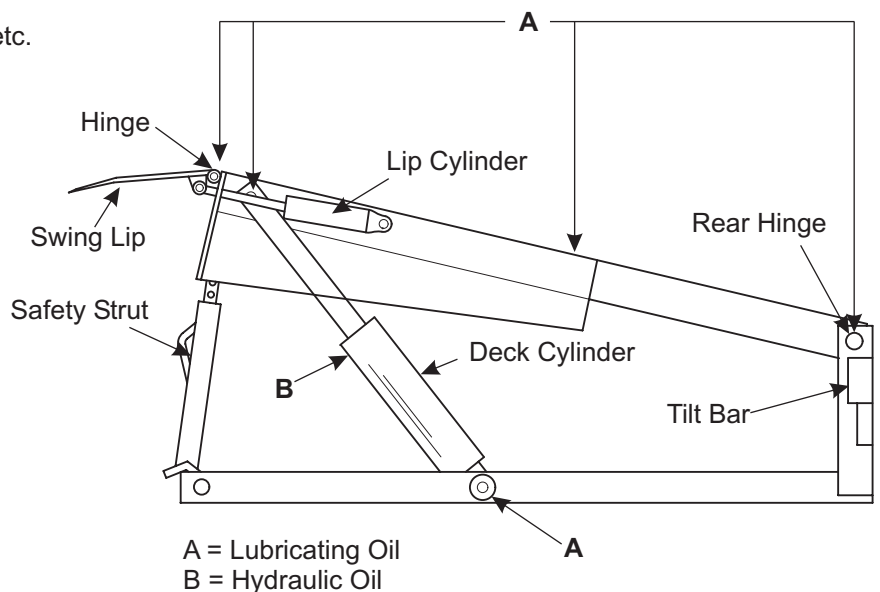

Inspection intervals outlined are for normal operating conditions. More frequent inspections are necessary for adverse conditions such as: heavy duty applications, high frequency usage, extreme temperatures, dirty environment, etc.

### HYDRAULIC DOCK LEVELLER

Under normal conditions no daily care is required except for the removing of dirt, rubbish, ect., from under the deck and lip hinge.

For optimum performance all moving parts should be kept well lubricated. Under normal conditions lubricate once a month.

1. Lubricate all pivot points.
2. Check for excessive wear, visual damage, etc.
3. Electro-hydraulic pump (if fitted).
4. Check lip hinge - clean and oil.
5. Check rear deck hinge - clean and oil.
6. Check tilt bars on each corner.
7. Check electric control box (if fitted).
8. Check hydraulic hoses and fittings.
9. Check hand hydraulic pump (if fitted).

### MAINTENANCE GUIDE

The dock leveller operating principles are intended as a guide to be used in conjunction with the parts section manual when troubleshooting and making adjustments or repairs. If no fault can be found and the equipment fails to operate correctly, contact D.D.L. Equipment or its authorized dealer.
