9 WAYS TO SAVE MONEY

- 1) Greatly reduces heating costs incurred by unprotected door openings.
- 2) Reduces air-cooling costs in summer.
- 3) Helps to maintain temperature control for special manufacturing processes and refrigeration products.
- 4) Maintains different room-to-room temperatures inside a plant.
- 5) Provides safer working conditions inside the dock area, because wind and rain cannot enter.
- 6) Reduces absenteeism, because employees working in dock areas without weather protection often experience temperature differences of up to 50° thereby making them more susceptible to colds, flu and illness.
- 7) Prevents pilferage by keeping intruders outside during docking time.
- 8) Lowers new building costs by enabling exterior docks to be fully utilized, and reducing the need for high cost, interior dock areas where trucks must completely enter buildings to load and unload.
- 9) Protects against - wind, rain and dust storms, i.e. south easter, mine sand, etc.
